For years, hospital and emergency medical services clinicians have relied on Nellcor™ Adult/Pediatric Colorimetric CO$_2$ detectors to verify proper endotracheal (ET) tube placement. These CO$_2$ detectors assure you that your patient is intubated properly right from the start—and remains that way during transport.

The easy-to-use CO$_2$ detector attaches directly to the ET tube and responds quickly to exhaled CO$_2$ with a simple color change from purple to yellow. Nellcor Adult/Pediatric Colorimetric CO$_2$ detectors are an economical, yet invaluable airway management tool. Whether you’re intubating patients in the ED, the ICU or the field, choose reliable technology from a name you trust.
A COST-EFFECTIVE WAY TO MEET PUBLISHED GUIDELINES

Clinical guidelines and standards from the following organizations state that carbon dioxide detection should be an adjunct to clinical assessment when verifying correct ET tube placement.

- American Heart Association
- American Association for Respiratory Care
- American Society of Anesthesiologists
