

Devon™ Surgical Site Mini-Marker

Some traditional skin markers, when used in conjunction with alcohol based prepping agents, can wash off rendering the site mark difficult to read. Devon™ Surgical Site Mini-Marker resistant product resists wash off after standard skin preparation and draping.¹

- Single patient use prevents cross contamination
- Mark remains visible after scrubbing with common antiseptics, including alcohol based prep agents
- Designed to minimize waste
- Non-smearing, non-toxic ink formulation
- Non-sterile for use prior to the sterile field
- Clear, bulk packaging for accessibility in the pre-operative setting

The World Health Organization, Guidelines for Safe Surgery 2009, Section II, The ten essential objectives for safe Surgery².

Objective 1

- The team will operate on the correct patient at the correct site.

Step 2

Marking

- The universal protocol states that the sites or sites to be operated on must be marked.
- Markings must be unambiguous, clearly visible, and made with a permanent marker so that the mark is not removed during site preparation.

Recommendations

- The surgeon performing the operation should mark the site of surgery in cases involving laterality or multiple structures or levels (e.g. a finger, toe, skin lesion, vertebra).
- As a final safety check, the operating team should collectively verify the correct patient, site and procedure during a 'time out' or pause immediately before skin incision.

Devon™ Surgical Site Mini-Markers

Cardinal Health recognizes the heightened awareness and concern for patient safety and the prevention of medical errors in the operating room. The Devon™ Surgical Site Mini-Markers is the latest addition to the comprehensive range of Devon™ Skin Markers supplied by Cardinal Health.
