

Meeting the surgical challenge:

Chest Wall Reconstructions

GORE® DUALMESH® Biomaterial

GORE-TEX® Soft Tissue Patch

Choosing the right prosthetic material can make the difference in successful chest wall reconstructions. Thoracic surgeons are finding that expanded polytetrafluoroethylene (ePTFE) makes that difference.

A key advantage of the ePTFE in chest wall reconstruction is its microporous structure that inhibits the passage of fluid.¹ This helps in re-establishing pulmonary function by restricting air leakage and preventing the transfer of pleural fluid across the chest wall. The material's high, balanced strength:

- allows the tension needed for a firm reconstruction that minimizes paradoxical wall movement and
- provides dependable suture retention.

Yet, the material remains soft and highly conformable allowing:

- ease of handling and
- less irritation to surrounding tissues

Tissue ingrowth is encouraged by the microporous structure of this unique material. This results in a significantly lower incidence of adhesion formation.² It combines strength with softness to provide unmatched performance and superior handling.

through experience

GORE® DUALMESH® Biomaterial

Sizes Available

Catalogue Number	Nominal Thickness	Nominal Width x Length
1DLMC02	1 mm	8 cm x 12 cm
1DLMC03	2 mm	10 cm x 15 cm*
1DLMC04	2 mm	15 cm x 19 cm*
1DLMC05	—	7.5 cm x 10 cm
1DLMC06	2 mm	18 cm x 24 cm
1DLMC07	2 mm	20 cm x 30 cm
1DLMC08	2 mm	26 cm x 34 cm*
1DLMC09	—	12 cm**

* Oval Shaped ** Round

GORE-TEX® Soft Tissue Patch
